

SKIN CLASSIC POST-CARE

After a Skin Classic Treatment it is common to feel:

- Irritated as well as redness and some crusting may form on areas involved
- Make sure you DO NOT pick at the crusting because prematurely removing the crust may cause hyperpigmentation or scarring
- If the area is still irritated by the end of the day a clean baggie of frozen peas works well 10 minutes on and 10 minutes off. Moisturize after with something gentle.
- Keep your skin clean and moisturized during the day.
- Makeup may be worn over moisturizing sunscreen.
- You MUST use moisturizing sun block everyday whether it is rainy or snowy. Sun block is your defense against anti-aging.
- AVOID direct sunlight immediately following treatment.
- When cleansing the face or showing use mild products without alcohol
- Pat dry instead of rubbing to prevent removal of crust
- DO NOT use any other form of peeling or bleaching products for 30 days
- After crust sloughs the skin may be pink. Be sure to wear SPF 30 or higher
